

Outdoor Living

Decking:

Our Decking department can help you determine the best option for your outdoor space. We can help you understand your material options and the benefits of selecting between Wood, Composite or Cellular PVC Decking. We also stock a complete line of Fasten Master products that include products which conceal the fastener heads without caulking, sanding or painting. Additionally, beyond all the great special order deck solutions, trims and railings, we also stock ballisters, handrails, fasteners, cleaners, stains and hardware for your deck building needs.

Wood Decking:

The Wood Decking selection includes economical options such as treated Wood, Cedar and Nova Ipe decking which are available in a variety of lengths and sizes:

- Treated Lumber - Made of southern Yellow Pine which has been treated to help protect against termite and pest damage or fungal decay. This particular wood option is both stainable and paintable but typically needs to be refinished every other year. Coordinating stock items such as ballisters, structural supports, fascia and hardware are available in our warehouse and ready to deliver.
- Cedar Lumber - This is a more superior all weather decking solution. It is less likely to warp or twist and will certainly hold its shape longer. Staining this product bi-yearly is recommended. Cedar has a natural rich grain that compliments most any home. Nova Ipe - This exotic hard wood is a high-end product that produces beautiful results. Its cleanline finish and natural resistance to insects and decay are the greatest features.
- Nova Ipe Decking has a rich dark brown color with beautiful grain characteristics. Also known as Brazilian Walnut, an Ipe deck will gradually age to a lustrous silver-grey if left untreated. It can be oiled or stained to retain its rich brown color. Nova

Ipe Decking is available in sizes 1x4 through 2x12, 2x2 balusters, and 4x4 posts.

Composite Decking:

Composite Decking is made of 50% wood and 50% PVC allowing it to have a longer durability and less maintenance than wood deck alternatives. Composite decking comes in a variety of colors. You do not need to paint or stain this substrate. Rather, it is a washable deck that you treat twice a year with a bleach mixture or composite cleaner to prevent mildew and maintain its new look. Schilling stocks many items to match the composite decking systems such as 1"x8" and 1"x12" fascia pieces, joice hangers, structural solutions, cleaners and more.

Cellular PVC:

Cellular PVC is a solid, extruded material that has the working characteristics of wood, and is used for interior trim, exterior trim, and paneling as well as windows and doors and decking. It is lighter than composite decking, will not stain or fade, it is mold and mildew resistant and only requires soap and water to get clean each year. Great outdoor solution!

Grills:

Weber Grills - What deck is complete without a grill? And only the best for your new deck or backyard living area. That means Weber. Schilling stocks the complete line of Weber products. The perfect final touch to get the party started or a great gift for dad. Electric, Charcoal, Propane or natural gas, we have them all. The 2010 collection has over 40 grill models to choose from, many of which we have right in our showroom. On top of that, we can create the deck that surrounds it, your outdoor kitchen or bar and sparkling glass doors to boot. Stop in for details and specials.
